Summary

Full-stack developer with 2.5 years of experience building backend services and web applications with Node.js, TypeScript and React, plus some ASP.NET Core. Built document-processing systems for US real estate clients using AWS Lambda and the OpenAI API. Currently building an agentic AI assistant for a FedEx client on Databricks, LLMs and Claude agents.

Skills

Languages	JavaScript (ES6+), TypeScript, C#, SQL
Backend & Databases	Node.js, Express.js, NestJS, ASP.NET Core, REST APIs, OpenAPI/Swagger, PostgreSQL, DynamoDB, Redis, Azure Cosmos DB
Frontend	React.js, Redux, Tailwind CSS
AI & Data	OpenAI API, Claude agents, LLM tool calling, MCP, Databricks, prompt design
Cloud & Testing	AWS (Lambda, ECS Fargate, S3, SQS, CloudWatch), Docker, Jenkins, Datadog, Jest, TDD, Git, Agile/Scrum

Experience

CentraLogic India Pvt. Ltd. **April 2024 – Present**
Software Engineer – Full Stack *Pune, On-Site*

Customer 360 Companion – FedEx (current project) *Jan 2026 – Present*
Node.js · TypeScript · React.js · Databricks · Claude agents · LLMs · MCP · SQL

- Building an AI assistant for FedEx account directors over Customer 360 data in Databricks. It answers questions or opens with a briefing, and each director sees only their own accounts.
- The LLM never picks the numbers: code selects the facts, the LLM only writes the wording, and validators check every figure against a fact. If no certified metric covers a question, the assistant refuses and says what is missing.
- Working on the Node.js and React app and on agent tools, exposed over MCP, that read curated Databricks views and return rows with the metric definition, period and source.
- The LLM layer supports more than one provider (OpenAI-compatible APIs and an internal GenAI service), so changing the model changes the wording, not the data.

Document AI – Extraction & Validation System – eXp Realty *Apr 2025 – Dec 2025*
Node.js · Express.js · TypeScript · React.js · Chrome Extension · AWS Lambda · ECS Fargate · DynamoDB · PostgreSQL · Redis · OpenAI API · SkySlope API

- Built a Chrome extension on top of the SkySlope website, using the SkySlope APIs to fetch transaction data and compare it against fields extracted from documents.
- Built the backend as a serverless pipeline on AWS Lambda and ECS Fargate with Docker and versioned REST APIs (OpenAPI/Swagger), handling 1,000+ documents per day.
- Used the OpenAI API to extract structured data from PDFs, reducing manual review time. Stored results in DynamoDB and PostgreSQL.
- Tuned PostgreSQL queries and indexes and added Redis caching for frequently read metadata, improving document lookup times.
- Built the React frontend (hooks, Redux, Tailwind CSS).

Document Intake Tool – eXp Realty *Apr 2024 – Mar 2025*
ASP.NET Core · C# · Azure Cosmos DB · OpenAI API · React.js · Jira API

- Built REST APIs in ASP.NET Core and improved the Cosmos DB partition key design to reduce cross-partition queries.
- Automated document training and validation with configurable OpenAI prompts, covering jurisdiction-specific rules (58 rule sets).
- Added a Jira API integration that creates tickets from flagged issues, replacing manual escalation follow-up.
- Set up Jenkins CI/CD with PR-based reviews and Jest tests; worked directly with the client on deadlines.

Education

Bachelor of Engineering – Information Technology **2020 – 2024**
Savitribai Phule Pune University, Maharashtra *CGPA: 9.18/10 · 2nd Rank in Department*

Certifications

AWS Certified Cloud Practitioner · Node.js Application Development (Linux Foundation) · Docker Essentials (IBM)
